Programmable Polymers Laboratory

Research Group led by
dr hab. inż. **Róża Szweda**, Prof. UAM

PROGRAMMABLE
POLYMERS
LABORATORY

Shape the Future of Materials with Us!

Useful definitions:

- Sequence-defined polymers: polymers with a strictly predefined monomer sequence and exact molar mass
- Stereo-controlled polymers: polymers with a strictly predefined arrangement of stereocenters

We invite students for internship program to be involved in cutting-edge research projects

What We Do?

We use sequence control to program properties and functions of synthetic polymers

Key Research Areas:

- Synthesis of **sequence-defined polymers**
- Developing polymers with **precisely controlled sequences and structures**
- **Study of sequence-property relationship**
- Applications: **data storage, drug delivery, catalysis, sensing** and more

How Do We Programme Functions Into Polymers?

Automated syntheses & analyses
to facilitate discovery

Our methodology: Programming Functions with AI

Sequence-function relationship

Automated experiments
High-throughput analysis

Sequence-function data

$M_1M_2M_1M_2(\dots)M_1M_4$ 20%
 $M_1M_2M_1M_2(\dots)M_1M_4$ 16%
 $M_1M_2M_1M_2(\dots)M_1M_4$ 76%
(...)
 $M_1M_2M_1M_2(\dots)M_1M_4$ 18%

Data description

Properties

Neural networks

Predicted data

$M_1M_2M_1M_2(\dots)M_1M_4$ 10%
 $M_1M_2M_1M_2(\dots)M_1M_4$ 36%
 $M_1M_2M_1M_2(\dots)M_1M_4$ 98%
(...)

Validation loop

Why Machine Learning?

- Helps decode complex relationships between polymer **sequence, structure, and function**.
- Enhances the prediction of **material behaviors** and **properties**.

Research Projects

European Research Council
Established by the European Commission

ERC Starting Grant: No 101116700

SHAPE - Abiotic enzymes

Artificial enzymes with the precision and power of nature – but without the limitations! Imagine catalysts that work beyond water and physiological conditions.

Sonata BIS: No 2021/42/E/ST4/00010

PolyDigit - Data storage

Unlock the Code: Store binary (or any) information directly in the sequence of monomers! Join us in tackling the future of data storage, together.

OPUS LAP: No 2021/43/I/ST4/01294

MimicLS - Life-like materials

Custom-designed macromolecules with powerful properties: imagine flexibility, self-healing, antimicrobial action, and more! In MimicLS we make new materials with functions mimicking natural matter.

szwedlab.com

LIDER/27/0148/L-12/20/NCBR/2021

PolySens - sensors

Precision polymers that respond to their surroundings: adaptable properties triggered by environmental changes or specific molecules!

Our team

Dr. Róża Szweda
Dr. Krzysztof Zwoliński
Dr. Siyasanga Mbizana

Weronika Forysiak
Maksymilian Szatko
Kasper Witruk
Wojciech Dudziak

We are recruiting PhD students and Post-docs!

Key collaborators:

**UNIVERSITÉ
DE GENÈVE**

Takuji Adachi & Thomas Buergi, Ariel Perez Mellor (DFT, VCD)

Wrocław University
of Science and Technology

Tadeusz Andruniów (MD)

**UNIVERSITY OF
CAMBRIDGE**

Yusuf Hamied
Department of Chemistry

Paweł Dydio, Yang Zhang
(catalysis)

We welcome all motivated students!

If you are interested in joining our team, send your resume to szwedalab@gmail.com

We invite you to visit our social media channels:
